**De Odor Works Is A Natural Deodorant Alternative, By
Melody Schubert**

We set off on vacation to sunny Florida. On this trip we took our time driving and it was a relaxing ride shared with our family. Once we settled into our room at the resort we relaxed a while before preparing for dinner.

Moments passed before my husband asked about the deodorant, and I realized that exactly where it was; sitting on the dresser in our bedroom. This is not the first time we've forgotten deodorant, although it will be the last time since we discovered De Odor Works.

Crafted from lightweight medical grade stainless steel, the reusable De Odor Works eliminates odor easily; just take a shower, rinse, and then rub De Odor Works across areas of concern for 30 seconds under running water. It's really that simple, and De Odor Works does not contain harsh chemicals that can potentially irritate your skin nor does it contain aluminum. In fact, it contains no chemicals at all. It is non-allergenic and uses only ordinary tap water so it has no adverse effects whatsoever.

Regular washing with soap and water does not eliminate the bacteria that causes odors, and often commercial deodorants only mask the odor. The De Odor Works is designed specifically to remove body odor and it keeps it from coming back: all day, every day when used for 30 seconds in the shower daily.

Used daily in the shower, De Odor Works also helps eliminate foot odor, and because of its unique design it is completely re-usable and never needs replacement!
