Device combats bad summer smells

De Odor Works uses unique reaction mixing stainless steel and tap water

From Journal Reports

Warm weather is the best time to get active by going to the beach to play beach volleyball, hike or run. With 48 percent of those who work out exercising more during the hottest months of the year (survey conducted by FitSugar.com), August is the time when the largest percentage of the population sweats the most.

Sometimes deodorant just doesn't cut it. This brings about an odor problem.

De Odor Works is a new approach to odor elimination. It is a revolutionary new deodorant product made entirely of medical-grade, lightweight (approximately 2 ounces) stainless steel. Its secret is the unique reaction that occurs when ordinary tap water and stainless steel combine to neutralize odor. Using stainless steel with running water is a recognized method of eliminating the volatile sulfur compounds that cause odor. Chefs have been using a similar idea for years to rid their hands of stubborn smells such as garlic, fish and onion.

De Odor Works is safe, effective, comfortable, fast and easy to use. And it's reusable. Its odoreliminating action is activated under running water such as ordinary tap water in your shower. It can easily be added to your daily hygiene routine. Simply shower as usual with soap and water. Rinse well, then rub De Odor Works across areas of concern for 30 seconds under running water. Odor is gone! De Odor Works can be used under arms, on the feet, the groin — anywhere that you feel you have a problem with odor.

The price is \$19.95, plus shipping and handling.

For more information, call 888-874-8219 or visit www.deodorworks.com.
