

De Odor Works: So Fresh and So Clean

Eliminate embarrassing odors naturally! Make your deodorant a stainless steel bar.

[De Odor Works](#) (SRP: \$19.95) is a new approach to odor elimination. **De Odor Works** is a revolutionary new deodorant product made entirely of medical grade, lightweight (approximately 2 ounces) stainless steel. Its secret is the unique reaction that occurs when ordinary running tap water and stainless steel combine to neutralize odor. Using stainless steel with running water is a recognized method of eliminating the volatile sulfur compounds (VSC) that cause odor. Chefs have been using a similar idea for years to rid their hands stubborn smell such as garlic, fish, and onion.

Make that unpleasant body odor go away for good. I used it once, but was too afraid to brave the summer heat without anti-perspirant. It may be nice to not have to worry about the aluminum (and other chemicals) in antiperspirants and deodorants. This bar can easily be added to your daily hygiene routine. Simply shower as usual with soap and water. Then rub **De Odor Works** across areas of concern for 30 seconds under running water. Viola... odor is gone!
