As we all know, summer is the perfect time to get active by hitting the gym, going to the beach to play beach volleyball or football, or going for a hike. With 48% of people who work out more during the hottest months of the entire year (survey conducted by FitSugar.com), summer is the time when the largest percentage of the population sweats the most! Even when people don't work out, they still sweat more in the summer and sometimes deodorant just doesn't cut it. This brings about an odor problem.

De Odor Works is a new approach to odor elimination. De Odor Works is a revolutionary new deodorant product made entirely of medical grade, lightweight (approximately 2 ounces) stainless steel. Its secret is the unique reaction that occurs when ordinary running tap water and stainless steel combine to neutralize odor. Using stainless steel with running water is a recognized method of eliminating the volatile sulfur compounds (VSC) that cause odor. Chefs have been using a similar idea for years to rid their hands stubborn smell such as garlic, fish, and onion. De Odor is a deodorant substitute, not an actual deodorant, so good news — it is aluminum free!

Stay active and on-the-go, while still being healthy and hygiene-conscious!
